PROJECTS

CashiPay Management System — Top 1 Mini Capstone Project
Role: Full-Stack/Desktop Developer | Tech: Java, JavaFX, Scene Builder, JDBC, MySQL

- Built an offline-first desktop treasury management application with secure authentication, ledger tracking, interactive balance sheets, and real-time dashboard analytics.
- Delivered the full software development lifecycle — requirements, design, UML diagrams, testing, and documentation — and successfully defended the project before a panel, earning Top 1 among competing capstones.

Sumbong App — City Service Request System
Role: Full-Stack Developer | Tech: Next.js, React, Laravel, PHP, REST API, MySQL, Railway, Vercel, Render | Live: sumbong-sage.vercel.app

- Built a full-stack civic reporting platform where residents submit service requests by selecting a category, describing the concern, and attaching photo evidence.
- Architected an end-to-end system: a responsive Next.js frontend (Vercel) communicating via REST API with a Laravel/PHP backend (Render), backed by a cloud-hosted MySQL database on Railway.
- Implemented secure citizen authentication and an admin dashboard for reviewing, monitoring, and managing incoming requests in real time.

Sapatosan Shop — Full-Stack E-Commerce Platform
Role: Full-Stack Developer | Tech: Laravel, Blade, PHP, MySQL, Google Cloud Console (OAuth), Tailwind CSS, Postman | GitHub: peterGwapo29/Sapatosan_shop

- Developed a full-stack e-commerce platform with Google Sign-In, role-based access, and shopping cart, wishlist, checkout, and Cash-on-Delivery flows protected by Laravel middleware.
- Built an admin dashboard with sales metrics and interactive charts for order and catalog management.

WordPress WooCommerce Store — Men's Shoes E-Commerce Website

Role: WordPress/WooCommerce Developer | Tech: WordPress, WooCommerce, AJAX Side Cart, PHP, MySQL

- Developed a fully functional e-commerce website with complete admin management of products, categories, brands, inventory, discounts, pricing, customer accounts, and orders.
- Integrated an AJAX Side Cart for a seamless slide-out shopping experience (instant add-to-cart, quantity updates, live subtotal), plus a Login & Register Customizer for popup, slider, and inline authentication forms.
- Built a WooCommerce analytics dashboard covering sales overview, customer metrics, revenue reports, and inventory monitoring; implemented product discount management with scheduled promotions and sale-price comparison badges.
- Designed a responsive, secure storefront optimized for mobile and tablet, with protected user data and order status tracking (pending, completed, cancelled, refunded).

JavaFX POS Management System — Desktop Point-of-Sale System
Role: Java/Desktop Developer | Tech: Java, JavaFX, FXML, Scene Builder, MySQL, JDBC | GitHub: peterGwapo29/POS

- Engineered a dual-role (Admin/User) point-of-sale and inventory system with real-time KPI dashboards, low-stock alerts, barcode/SKU-tracked product management, and CSV-exportable sales reports.

ADDITIONAL PROJECTS

GradePad Student Portal
Flutter mobile app for teachers to publish grades and students to view them, with offline-first SQLite storage synced to Firebase. (Flutter, Dart, SQLite, Firebase)

Click Clutch
Responsive esports organization landing site with roster showcases, schedules, and merch, deployed on Vercel. (HTML, CSS, JavaScript, Vercel) — click-clutch.vercel.app

Vero Mobile App
High-fidelity Figma UI for an eco-community platform featuring event discovery and gamified rewards. (Figma, UI/UX Design)
